

MySQL Installation

Step 1) Click on the given link or copy the given link and search in chrome.

<https://dev.mysql.com/downloads/windows/installer/8.0.html>

Click on highlighted options as shown in given pictures

Step 2) Click on “No thanks, just start my download”

Step 3) Double click on setup as shown in picture

Step 5) Click on Next

Step 6) Click on Yes

Step 7) Click on Next

Step 8) Click on Execute

Step 9) Click on Next

Step 10) Click on Next

Step 11) Click on Next

Step 12) Click on Next

MySQL Installer
MySQL Server 8.0.31

Type and Networking

Server Configuration Type
Choose the correct server configuration type for this MySQL Server installation. This setting will define how much system resources are assigned to the MySQL Server instance.

Config Type: **Development Computer**

Connectivity
Use the following controls to select how you would like to connect to this server.

☒ TCP/IP Port: **3306** X Protocol Port: **33060**

☐ Open Windows Firewall ports for network access

☐ Named Pipe Pipe Name: **MYSQL**

☐ Shared Memory Memory Name: **MYSQL**

Advanced Configuration
Select the check box below to get additional configuration pages where you can set advanced and logging options for this server instance.

☐ Show Advanced and Logging Options

Next > **Cancel**

Step 13) Click on Next

MySQL Installer
MySQL Server 8.0.31

Authentication Method

☒ **Use Strong Password Encryption for Authentication (RECOMMENDED)**
MySQL 8 supports a new authentication based on improved stronger SHA256-based password methods. It is recommended that all new MySQL Server installations use this method going forward.
Attention: This new authentication plugin on the server side requires new versions of connectors and clients which add support for this new 8.0 default authentication (caching_sha2_password authentication).
Currently MySQL 8.0 Connectors and community drivers which use libmysqlclient 8.0 support this new method. If clients and applications cannot be updated to support this new authentication method, the MySQL 8.0 Server can be configured to use the legacy MySQL Authentication Method below.

☐ **Use Legacy Authentication Method (Retain MySQL 5.x Compatibility)**
Using the old MySQL 5.x legacy authentication method should only be considered in the following cases:
- If applications cannot be updated to use MySQL 8 enabled Connectors and drivers.
- For cases where re-compilation of an existing application is not feasible.
- An updated, language specific connector or driver is not yet available.
Security Guidance: When possible, we highly recommend taking needed steps towards upgrading your applications, libraries, and database servers to the new stronger authentication. This new method will significantly improve your security.

Step 13) Put a strong password and click on check.(Remember password or write down we need this password)

MySQL Installer
MySQL Server 8.0.31

Accounts and Roles

Root Account Password
Enter the password for the root account. Please remember to store this password in a secure place.

Current Root Password: ********* **Check**

< Back **Next >** **Cancel**

Step 14) Click on Next

Step 15) Click on Next

Step 16) Click on Execute

Step 17) Click on **Finish**

Step 18) Click on **Next**

Step 20) Click on **Finish**

Step 21) Click on Next

Step 22) Enter password (entered in step 13) and click on check

Step 23) Click on Next

Step 24) Click on Execute

Step 25) Click on Finish

Step 26) Click on Next

Step 27) Click on Finish

Step 28) Click on Local instance MySQL80

Step 29) Enter password (entered in step 13) and click on ok

Step 30) Click on **Schemas**

Step 31) Double click on Schema (Here I clicked on sys)

Step 32) Write your query and run
